

RAFAEL ATALA PULZI

Backend Developer | Junior Data Engineer | Python Specialist

São Paulo, Brazil | +55 11 96477-0108 | rafaelpulzi.profissional@gmail.com | linkedin.com/in/rafael-atalapulzi-6392b21a6 | github.com/RafaelPulzi

PROFESSIONAL SUMMARY

Data engineer and backend developer with hands-on experience building and automating data pipelines on Databricks (Spark/PySpark, Delta Lake, Unity Catalog, Workflows), turning raw data into reliable sources for business decisions. Bachelor's degree in Computer Science (UNIP). Complementary background in Python development for data collection and processing (modular scrapers with BeautifulSoup and Scrapy) and in computer vision (capstone project using YOLO/OpenCV/PyTorch applied to urban waste management). 3+ years in a corporate environment in technical support (N1/N2), with a track record as Top Performer, SLA management, and technical communication with end users. Fluent English.

PROFESSIONAL EXPERIENCE

Data Engineer / Freelance Developer — Workana *February 2023 – Present*

São Paulo, Brazil · Remote · 26 projects delivered

- Built and automated data pipelines on Databricks using Spark/PySpark, Delta Lake, Unity Catalog, and Workflows.
- Reduced management report generation time from approximately 4 hours to 30 minutes by automating data extraction and processing with SQL and PySpark.
- Unified around 4 scattered data sources (CRM, legacy systems, spreadsheets) into Delta Lake tables, eliminating approximately 15 hours/month of manual rework.
- Reduced business KPI inconsistencies by approximately 30% through data modeling and transformation standardization with Unity Catalog governance.
- Contributed to an approximately 20% improvement in purchasing/demand forecasting by cross-referencing and modeling data from multiple sources.
- Maintained independent data engineering studies (end-to-end pipelines, ETL, and dashboards), recreating real market problems to strengthen the technical stack.

N1/N2 Service Desk Analyst — Sonda ProcWork *March 2023 – Present*

São Paulo, Brazil

- Provided remote, bilingual (Portuguese/English) technical support, focusing on efficient incident resolution and SLA compliance.
- Recognized as Top Performer of the operation, combining high ticket volume, resolution speed, and strong satisfaction scores.
- Handled an average of 45 tickets/day, with peaks of 1,000+ tickets during high-demand months, maintaining consistent productivity and quality.
- Maintained an average NPS of approximately 92, with scores above 90 in roughly 88% of interactions.
- Kept one of the operation's best average handling times, around 10 minutes per ticket, through fast diagnosis and technical expertise.
- Resolved low- and medium-complexity incidents involving Windows, Microsoft Office, VPN, email, and corporate applications, including triage, escalation, and ticket documentation.

EDUCATION

Bachelor's Degree in Computer Science — UNIP

February 2022 – July 2026

PROJECTS

CLEANMAP — Smart Urban Cleaning Prioritization System (Capstone Project / Patent)

- Computer vision pipeline for urban solid waste management, combining YOLO, OpenCV, PyTorch, Leaflet.js, and IoT sensors.
- Image-based waste detection and collection route prioritization using geo-referenced data and optimized routing.

Obsidian Vault Health Auditor

- TypeScript/Node.js plugin built on the Obsidian API for knowledge-base quality auditing (orphan notes, broken links, outdated notes).

Web Scraping Tools

- Set of modular Python scrapers (Requests, BeautifulSoup, Pandas) with deduplication, error handling, and structured export to CSV/JSON.

Proxmox Server (Homelab)

- Virtualization environment for testing with multiple VMs, virtual networks, and isolated Linux services.

TECHNICAL SKILLS

Data & Data Engineering: Databricks, Apache Spark, PySpark, Delta Lake, Unity Catalog, Databricks Workflows, SQL, MySQL, ETL, data modeling, Pandas

Programming Languages: Python, JavaScript, TypeScript, SQL, HTML, CSS

Backend & APIs: Flask, Node.js, REST APIs, systems integration

AI & Computer Vision: YOLO, OpenCV, PyTorch, Ollama, natural language processing

Automation & Data Collection: Web Scraping, BeautifulSoup, Scrapy, Requests, Jupyter Notebook

Infrastructure & DevOps: Git, GitHub, Docker, Linux, Proxmox, virtual environments, VS Code

Visualization: Leaflet.js, dashboards, responsive web interfaces

LANGUAGES

Portuguese: Native

English: Fluent / Native or Bilingual

Spanish: Professional Working Proficiency

CERTIFICATIONS & COURSES

CS50 — Harvard University

Machine Learning and Data Science with Python — Udemy

Cybersecurity in Remote Work

S&I Workshop (Integrated Management System)

1st, 2nd, and 3rd Internal Sustainability & Technology Symposium
